

# Fact Sheet Kansas Fire Service Needs Assessment

There has been substantial progress in reducing many fire department needs, although more remains to be done.

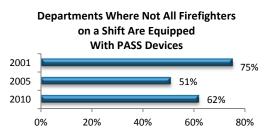

# **Protective Equipment and Clothing**

The 2010 percentage of Kansas departments without enough equipment to equip all personnel (or all personnel on a shift, as appropriate) was:

 73% for self-contained breathing apparatus (SCBA), compared to 78% in 2001 and 59% in 2005;

 62% for personal alert safety system devices (PASS), compared to 75% in 2001 and 51% in 2005;

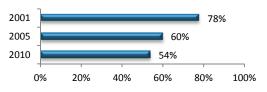

16% for personal protective clothing, compared to 27% in 2001 and 14% in 2005; and

54% for portable radios, compared to 78% in 2001 and 60% in 2005.

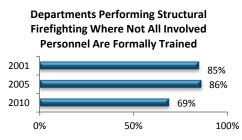

Departments Where Not All Firefighters on a Shift Are Equipped with Radios

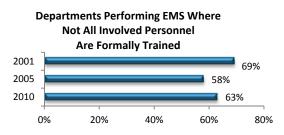

## Training

In many fire departments, **not all involved personnel have been formally trained** in their emergency response duties. The 2010 percentage of Kansas departments in which not all involved personnel have been formally trained was:

69% for structural firefighting, compared to 85% in 2001 and 86% in 2005; and

➢ 63% for emergency medical service (EMS), compared to 69% in 2001 and 58% in 2005.

#### **Fitness and Health**

In many fire departments, there is no program to maintain basic firefighter fitness and health.

The 2010 percentage of Kansas departments with no such program was:

> 81%, compared to 90% in 2001 and 90% in 2005.

### **Unusually Challenging Incidents**

There has been little or no progress in increasing the ability of fire departments to handle **various unusually challenging incidents** with local trained personnel and specialized equipment alone:

- Provide technical rescue and EMS at a structural collapse involving 50 occupants; and
- Provide hazardous material response and EMS at an incident involving chemical or biological agents and with 10 injuries.
- Wildland/urban interface (WUI) fire affecting 500 acres; and
- > Mitigation of a **major developing flood**.

However, there has been progress in the percentage of departments having written agreements for working with others. The 2010 percentage of Kansas departments with *no* such written agreement was:

- 53% for structural collapse, compared to 75% in 2001 and 67% in 2005;
- 51% for chemical or biological incidents, compared to 76% in 2001 and 61% in 2005;
- 27% for wildland/urban interface fires, compared to 55% in 2001 and 42% in 2005; and
- 44% for developing major flood, compared to 74% in 2001 and 70% in 2005.

Success requires more written agreements, with each participating department knowing its role, providing resources needed to play its role, and helping test the plan in simulations and rehearsals.

#### **Stations and Apparatus**

**Some stations lack specific features**, which are required by current standards but were not required when stations were constructed. Some stations are old enough that a variety of persistent or recurring problems are to be expected and replacement might be better and even cheaper. Some departments are using old fire apparatus.

- 48% of Kansas fire departments do not have backup power for their fire stations.
- 61% of Kansas fire departments do not have exhaust emission control for their fire stations.
- 23% of the fire stations in Kansas are over 40 years old.
- 13% of Kansas fire department engines and pumpers are at least 30 years old.

### **Cautions on interpretation**

**Trends**. For some states and most needs assessment survey questions, even large changes from one survey to another will not be statistically significant. Be cautious in interpreting results as trends.

**State-to-state comparisons**. States where a large share of departments serve small communities will tend to have greater needs according to the measures used here than states where a small share of departments serve small communities. State-to-state comparisons must be viewed with caution, particularly if the states have very different mixes of urban and rural communities.

**How rural is Kansas?** The survey for Kansas was based on the following responses:

- 7 of the 21 departments protecting populations of 25,000 or more;
- 14 of the 28 departments protecting populations of 10,000 to 24,999; and
- 71 of the 604 departments protecting populations of less than 10,000.
